BioRePeelCl3

Innovative patented BIPHASIC TECHNOLOGY

It is a complete aesthetic medical treatment for topical use, **painless, without needles and suitable for every area of the body.**

It is a medical device with biphasic technology **in compliance with the CE Norms** with an international patented formulation.

Compared to traditional treatments containing TCA and hydroxy acids, BioRePeelCl3 guarantees, besides the classic **INDIRECT** biostimulant action carried out by the acid complex, an effective DIRECT biostimulating action mediated by **AMINOACIDS**, **VITAMINS** and also a lifting action performed by **GABA**.

The synergy between **DIRECT** and **INDIRECT** biostimulation provokes superficial and deep tissue rejuvenation, with an illuminating, plumping and antioxidant effect and the relaxation of fine wrinkles with the formation of new collagen.

The biphasic tencology also gives the skin a smooth and velvety appearance from the first application without affecting the patient's sociability.
